Different Patterns of Evolution Convergent evolution. Convergent evolution is the process in which species that are not closely related to each other... Divergent evolution. Divergent evolution is the process in which a trait held by a common ancestor evolves into... Parallel evolution. Parallel ...

Different Patterns of Evolution - dummies
Evolution over time can follow several different patterns. Factors such as environment and predation pressures can have different effects on the ways in which species exposed to them evolve. shows the three main types of evolution: divergent, convergent, and parallel evolution.

Patterns of Evolution: Types of Evolution | SparkNotes
Understanding these patterns on a small scale can help in determining the relatedness of species over longer periods of time. There are three main patterns of species evolution. Convergent evolution occurs when dissimilar species gradually become more similar. This usually happens as a result of sharing similar lifestyles.
