The projected accumulative loss for the remainder of the 21st century is said to be 130TWh – equivalent to the current total annual generation output from all African hydropower plants. However, country-specific data shows that while climate change will have significant impacts, the patterns may vary significantly by country.

Is it possible to climate-proof East Africa's hydropower ...

Climate change is a global threat to security in the 21st century. It will stress the world's economic, social, and political systems. Where institutions and governments are unable to manage the stress or absorb the shocks of a changing climate, the risks to the stability of states and societies will increase.

A New Climate for Peace

The growth in RES plus hydropower in the unconstrained energy use scenario has a longer shallower ramp up during much of the 21st century and does not reach 50% of total energy until 2054. In contrast, the climate constrained scenario requires an immediate and rapid expansion of RES, reaching 50% of total energy by 2028.
