### Answer Key Through The Eye

Key Takeaways: The Human Eye and Vision The main parts of the human eye are the cornea, iris, pupil, aqueous humor, lens, vitreous humor, retina, and optic nerve. Light enters the eye by passing through the transparent cornea and aqueous humor. The iris controls the size of the pupil, which is the opening that allows light to enter the lens.

### Structure and Function of the Human Eye - ThoughtCo

light come into your eye. It also helps the eye to focus as light passes through. The colored part of your eye is called the iris. In the middle of your iris is the black pupil. Light first travels through the cornea, and then into the pupil. There are tiny muscles attached to the iris that help control the amount of light that can get through. In very

### The Human Eye

First, light passes through the cornea (the clear front layer of the eye). The cornea is shaped like a dome and bends light to help the eye focus. Some of this light enters the eye through an opening called the pupil (PYOO-pul). The iris (the colored part of the eye) controls how much light the pupil lets in. Next, light passes through the lens (a clear inner part of the eye).

### How the Eyes Work | National Eye Institute

Aqueous Humor: The aqueous humor is the clear, watery fluid located inside the eye that provides the eye with nutrients. Cornea: The cornea is the clear, dome-shaped tissue that covers the front of the eye. Iris: The iris is the colored part of the eye. It controls the amount of light that can enter into the eye.

### Basic Anatomy - The Eye - Education Quizzes

Light enters your eye through a clear portion of the sclera (the tough, white, outer covering of the eye), called the cornea. The cornea is curved, so it slightly bends the light as it goes through. Light then passes through the aqueous humor (a clear fluid for eye nourishment, in the anterior chamber) and through the pupil.
