and certainly by the 1960s, as a young PhD student, I referred to myself as a 'fish parasitologist'. However, the number of involved researchers in Western Europe and North America was small in comparison with those in Eastern Europe and the Former Soviet Union (FSU), where the fields of aquaculture and both freshwater and marine ...

History - ISFPX Cairns 2021

The acanthocephalan, *Neoechinorhynchus saginatus*, and the nematode, *Rhabdacona cascadilla* dominated the rheophilous assemblage of fish parasites, but the prevalence rate and intensity of *R. cascadilla* was significantly reduced downstream.

Fish parasitism in a new impoundment and differences ...

Like humans and other animals, fish suffer from diseases and parasites. Fish defences against disease are specific and non-specific. Non-specific defences

include skin and scales, as well as the mucus layer secreted by the epidermis that traps microorganisms and inhibits their growth. If pathogens breach these defences, fish can develop inflammatory responses that increase the flow of blood to infected areas and deliver white blood cells that attempt to destroy the pathogens. Specific defences a

Intestinal helminth parasites in flounder Platichthys ...

Fish parasites are important biological indicators to describe migration patterns of fish stocks, trophic and phylogenetic interactions as well as pollution and eutrophication. Marine parasitology is an important field in aquatic science because of its close linkage to other fields in marine sciences like fisheries, Mari culture , fish ecology ,

helminth infestation in *Ompok bimaculatus* (Bloch 1794) and *O. pabda* (Hamilton- Buchanan 1822) in relation to some of their biological, pathological and biochemical aspects).

Professor Dr. Hamida Khanum - Professor Dr. Hamida Khanum

Glochidial infections occurring in farmed fish in tropical regions (Southeast Asia), however, thus far, have not caused concern (Kabata, 1985). There are no records of infection in farmed fish in Africa and the Near East. Natural infections occur predominantly in small fish residing in shallow, inshore waters (young fish and littoral species).

Parasites and Behaviour - Google Books

Parasites are now increasingly used as indicators for the differentiation of stocks in marine fish (Mckenzie 2002). Although qualitative differences may not exist in the parasite fauna of R. kanagurta from different regions there is a possibility that quantitative differences exist in the occurrence of various species of parasites.
