Asset-Backed Commercial Paper (ABCP) Definition

Background: Asset-backed securities (ABS) are created by buying and bundling loans – such as residential mortgage loans, commercial loans or student loans – and creating securities backed by those assets, which are then sold to investors. Often, a bundle of loans is divided into separate securities with different levels of risk and returns.

Dodd-Frank Act Rulemaking: Asset-Backed Securities

Securitization involves pooling debt obligations, such as loans or receivables, and creating securities backed by the pool of debt obligations called asset-backed securities (ABS). The cash flows of the debt obligations are used to make interest payments and principal repayments to the holders of the ABS. Securitization has several benefits.

Introduction to Asset-Backed Securities

These securities are known as Asset-backed Securities (ABS), an umbrella term used to refer to a kind of security that derives its value from a pool of assets which could be a bond, home loans, car loan or even credit card payments. In this article, we look at Asset-Backed securities and their types in detail.
