Bacteriological Analytical Manual (BAM) | FDA

Bacteriological water analysis is a method of analysing water to estimate the numbers of bacteria present and, if needed, to find out what sort of bacteria they are. It represents one aspect of water quality. It is a microbiological analytical procedure which uses samples of water and from these samples determines the concentration of bacteria. It is then possible to draw inferences about the suitability of the water for use from these concentrations. This process is used, for example, to routin

Bacteriological water analysis - Wikipedia

Bacteriological Methods for the Analysis of Drinking Water. ... Process Control Chemistry for Drinking Water Laboratories. The objective of this workshop is to provide participants with technical skills and knowledge to perform chemical procedures for the examination of drinking water. The workshop combines lectures and laboratory exercises to ...
