Becoming Water: Glaciers in a Warming World by Mike Demuth ...

The degree to which glacier runoff contributes to downstream meltwater varies according to the basin, with glacier contributions being as much as 25% of the annual water budget. In many of these basins, peak meltwater is expected to have passed (e.g., Ref. 10), or will be passed in the next 20-30 years (e.g. Ref. 11).

Glaciers as a water resource - AntarcticGlaciers.org

Glaciers are a crucial element of the world's ecosystem. But like many aspects of the natural world, they are becoming increasingly threatened by the consequences of human industry and activity. Though there are efforts being made to stymie the gradual melting of these large ice bodies, it remains unclear if what is being done will be enough.
