A planet is considered out of bounds when its declination is beyond the outer bounds or limits of that of the Sun, i.e. greater than 23 degrees and 27 minutes of declination, either North or South. The energies of these planets tend to be a little out of control, stretched, or over the top during these periods.

Out of Bounds: Dates Table

We recognize that many companies on earth have similar needs for mission-critical systems with acute situational awareness in real-time, predictive analytics, domain expertise at the edge, and instantaneous human-like reasoning to make informed decisions and take meaningful action. This is why Beyond Limits was created.

Front Page - Beyond Limits

Planet Nine is a hypothetical planet in the outer region of the Solar System. Its gravitational effects could explain the unusual clustering of orbits for a group of extreme trans-Neptunian objects (eTNOs), bodies beyond Neptune that orbit the Sun at distances averaging more than 250 times that of the Earth. These eTNOs tend to make their closest approaches to the Sun in one sector, and their ...
