If you're looking for out-of-print books in different languages and formats, check out this non-profit digital library. The Internet Archive is a great go-to if you want access to historical and academic books.

### Brake Lining Profile

The brake lining is that part of the brake pad which actually contacts the metal brake disc (rotor) when the brake is engaged. Using a typical bicycle brake as an example, the backing would be the metal shell which provides mechanical support, and the lining would be the rubbery portion which contacts the rims when the brakes are applied.

### Brake lining - Wikipedia

These include brake pads and brake linings for automotives and trucks (see Figure 1), heavy duty high temperature brakes (e.g. trains, race cars) and friction parts for industrial equipment. Often, the term brake lining includes all the diverse products mentioned. Brake linings can be classified into 4 classes (Table 1).

### Brake Lining - Profile

High-Strength Brake and Clutch Lining Also known as semimetallic woven strips and friction material, these strips have a brass wire woven into the material to increase strength and improve heat dissipation. They can be riveted or bonded. They do not contain asbestos.
