Calcium channel blockers are a type of medication that people take to increase the flow of blood and oxygen to the heart. Doctors may prescribe a calcium channel blocker to treat high blood...

Calcium channel blockers: Uses, types, and side effects

Calcium channel blockers lower your blood pressure by preventing calcium from entering the cells of your heart and arteries. Calcium causes the heart and arteries to contract more strongly. By blocking calcium, calcium channel blockers allow blood vessels to relax and open.

Calcium channel blockers - Drugs.com

Calcium channel blockers (CCBs) are drugs that bind to and block the L-type calcium channel. The L-type channels are the predominant calcium channels in the myocardium and the vascular smooth muscles.

Calcium channel blockers - Knowledge for medical students ...

Calcium channel blockers, calcium channel antagonists or calcium antagonists are a group of medications that disrupt the movement of calcium through calcium channels. Calcium channel blockers are used as antihypertensive drugs, i.e., as medications to decrease blood pressure in patients with hypertension. CCBs are particularly effective against large vessel stiffness, one of the common causes of elevated systolic blood pressure in elderly patients. Calcium channel blockers are also frequently us

Calcium channel blocker - Wikipedia

Definition. Calcium channel blockers are medicines that slow the movement of calcium into the cells of the heart and blood vessels. This, in turn, relaxes blood vessels, increases the supply of oxygen-rich blood to the heart, and reduces the heart's workload.

Calcium channel blockers - Medical Dictionary

Calcium channel blockers (CCBs) are a class of drugs that dilate the arteries, and are used for treating high blood pressure, abnormally rapid heart rhythms, pulmonary hypertension, Raynaud's syndrome, cardiomyopathy, and subarachnoid hemorrhage.

Calcium Channel Blockers, CCBs Brand Names & Side Effects

Calcium channel blockers are drugs used to lower blood pressure. They work by slowing the movement of calcium into the cells of the heart and blood vessel walls, which makes it easier for the heart...

Calcium Channel Blockers for High Blood Pressure: Types ...

Calcium channel blocking agents restrict the amount of calcium entering cardiac and smooth muscle cells by blocking voltage-gated calcium channels. This causes blood vessels to relax and widen (vasodilate), improves oxygen supply to the heart, and lowers blood pressure. Some calcium channel blockers also slow the heart rate.

List of Calcium channel blocking agents (calcium ...

How to use Conjupri 5 Mg Tablet Calcium Channel Blockers. Consult your pharmacist or physician. Related Links. ... Call your doctor for medical advice about side effects. You may report side ...

Conjupri 5 Mg Tablet Calcium Channel Blockers - webmd.com

Calcium channel blockers (CCB), calcium channel antagonists or calcium antagonists are a group of medications that disrupt the movement of calcium (Ca 2+) through calcium channels. Calcium channel blockers are used as antihypertensive drugs, i.e., as medications to decrease blood pressure in patients with hypertension.CCBs are particularly effective against large vessel stiffness, one of the ...

Calcium channel blocker - Wikipedia

Calcium channel blockers (CCBs) dilate the arteries, reducing pressure within and making it easier for the heart to pump blood, and, as a result, the heart needs less oxygen. By reducing the heart's need for oxygen, calcium channel blockers relieve or prevent angina (chest pain).

Beta-Blockers vs. Calcium Channel Blockers: Blood Pressure ...

calcium channel blocker (calcium channel blocking agent) a drug such as nifedipine, diltiazem, or verapamil that selectively blocks the influx of calcium ions through a calcium channel of cardiac muscle and smooth muscle cells; used in the treatment of Prinzmetal's angina, chronic stable angina, and cardiac arrhythmias. Calcium channel blocking agents act to control arrhythmias by slowing the rate of sinoatrial node discharge and the conduction velocity through the atrioventricular node.
