Cleanroom requirements and standards provide a direct and easy-to-understand way of detailing the differences between the eight classes of cleanrooms.

Cleanrooms are rated based on the number of particles they can handle.

They range from an ISO class 1 (cleanest) to an ISO class 8 (least-clean).

& paper products inside your desk or locker - do not take them into the cleanroom. Cleanroom garments with pockets should always be empty, unless authorized by your supervisor.

## **CLEANROOM PROTOCOL GUIDELINES**

ISO 6 Cleanroom (Class 1 000) In theory, for an entire room to reach ISO 6 air cleanliness, you need to enter the cleanroom via an ISO 8 (ante-room), then go through an ISO 7, to finally get into the ISO 6, as shown in the image. In reality however, you can reach an ISO 6 clean room with 1 (recommendation is 2) airlock.

## **eCatalog**

The space cleanliness classification is the primary variable in determining a cleanroom's supply airflow. Looking at table 3, each clean classification has an air change rate. For example, a Class 100,000 cleanroom has a 15 to 30 ach range. The cleanroom's air change rate should take the anticipated activity within the cleanroom into account.

## **ASHRAE Design Guide For Cleanrooms | [ashrae.org](http://ashrae.org)**

Cleanroom classifications are an important part of cleanroom design, development, and everyday use. They regulate a cleanroom's degree of cleanliness and are defined by the allowed amount of contamination by particle count and size, as well as the necessary air change rates depending on the cleanroom's classification level.
