metabolism "of choice" would probably be anaerobic respiration. Since the Moon does not have an oxygen-rich atmosphere, organisms living there would not use oxygen as their terminal electron acceptor in cellular respiration.

Glycolysis and Cellular Respiration Questions | Shmoop

Acces PDF Cellular Respiration Questions And Answers

Multiple Choice

Glycolysis is the first step in cellular respiration, and is seen in both aerobic and anaerobic respiration. The products of glycolysis are pyruvate, NADH, ATP, and water. Oxygen is only a product of the light reactions of photosynthesis; it is consumed as a reactant in the electron transport chain.
