Odyssey - Compass Learning 1,0,0,0

You can compare the earth's near-dipole field to a short magnet with its south magnetic "pole" directed toward the north geographic pole of the earth. The magnetic pole of a compass needle is defined to be the "north-seeking" end, i.e., the end that "seeks" (points generally toward) the north geographic pole.

2. Why does a compass point north? The compass points to Geographic North, which is really the magnetic South Pole. Therefore the North Pole of the compass is attracted to the South magnetic end of Earth. 3. What is magnetic declination? It is the difference between the direction a compass points and the direction of true north.

If A and B represent two legs of a walk (two displacements), then R is the total displacement. The person taking the walk ends up at the tip of R. There are many ways to arrive at the same point. In particular, the person could have walked first in the x-direction and then in the y-direction. Those paths are the x- and y-components of the resultant, R_x and R_y .
