Computer Power And Legal Language

Computer Power and Legal Language explores the central issues involved in the use of computers to conduct legal business. The contributors, all experts in their field, take as their starting point fundamental questions about the potential utility of computational models of linguistics, intelligence, and logic in the law: Is it possible to use computing to communicate in the manner legal experts do?

I don't understand why a much more powerful computer would make any difference. The memory-cycle time for the AGC was 11.7 microseconds. A single-precision addition in the assembler language took two memory cycles. Other basic instructions needed 1, 2 or 3 memory cycles. One memory cycle took 24 cycles of the 2.048 MHz clock. (added by Uwe)
