Mathematically, we can say that a charge is the number of electrons multiplied by the charge on 1 electron. Symbolically, it is. $Q = ne$. where q is a charge, n is a number of electrons and e is a charge on 1 electron (1.6×10^{-19} C). The two very basic natures of electric charges are. Like charges repel each other.

For charged plates, we use: $\Delta P.E. \text{ electric} = -qEd$. 2. Lesson 5–6 Review. 1. [Electron volt]—Although this term includes the word “volt”, it is really a unit of energy. The conversion between electron volts and joules is: $1 \text{ eV} = 1.6 \times 10^{-19} \text{ J}$. 2. [4.5 eV]—One proton has the same charge as one electron, so we will use $1.00 e$ as the value for q.

Answer Key - Electric Charges, Forces, and Fields ...

The most fundamental electric charge is the charge of one proton or one electron. This value (e) is $e = 1.602 \times 10^{-19}$ coulombs. It takes about 6.24×10^{18} excess electrons to equal the charge of one coulomb; thus, it is a very large static charge.
