The theory seeks to explain how an information-processing machine such as the brain can insist it has consciousness, describe consciousness in the magicalist ways that people often do, assign a high degree of confidence to those assertions, and attribute a similar property of consciousness to others in a social context. AST is about how the brain builds informational models of self and of others, and how those models create physically incoherent intuitions about a semi-magical mind, while at...

Since 2010 Graziano's lab has studied the brain basis of consciousness. Graziano proposed that specialized machinery in the brain computes the feature of awareness and attributes it to other people in a social context. The same machinery, in that hypothesis, also attributes the feature of awareness to oneself.

### Michael Graziano - Wikipedia

Neuronal correlates of consciousness are the parts of the brain thought to be required for consciousness to occur. The idea that there are only neuronal correlates of consciousness, and that these correlates are the patterns of synaptic firing in specific parts of the brain, is what you might call the conventional view in neuroscience.If we peer deeply into the brain, in other words, what we ...
