The cat that runs to its food dish when it hears the sound of the cupboard opening; the rat that solves a maze in the laboratory; the bird that acquires the song of its species—these and many other common examples demonstrate that animals can learn. Yet what is meant by saying that animals can learn? What, in other words, is learning? This question proves exceedingly difficult to answer, and, in fact, some theorists propose that no single, all-encompassing definition of learning is at all ...
