### Depletion And Decline Curve Analysis

Decline curve analysis is a long established tool for developing future outlooks for oil production from an individual well or an entire oilfield. Depletion has a fundamental role in the extraction of finite resources and is one of the driving mechanisms for oil flows within a reservoir. Depletion rate also can be connected to decline curves.

Decline curve generated by decline curve analysis software, utilized in petroleum economics to indicate the depletion of oil & gas in a petroleum reservoir. Decline curve analysis is a means of predicting future oil well or gas well production based on past production history.

### Decline curve analysis - Wikipedia

Originally introduced by Arps [31,32], decline curve analysis is a simple tool to model and predict future production under the assumption that depletion is the driving decline mechanism. Decline can be constant ( $\beta = 0$ ), directly proportional to production rate ( $\beta = 1$ ) or proportional to a fractional power of the production rate ( $0 < \beta < 1$ ).

### Decline and depletion rates of oil production: a ...

Decline curve analysis (DCA) is used to predict the future production of oil and gas, and it has been widely used since 1945. Arnold and Anderson (1908) presented the first mathematical model of DCA. Cutler (1924) also used the log-log paper to obtain a straight line for hyperbolic decline, so the curve shifted horizontally. Larkey (1925) proposed the least-squares method to extrapolate the ...

in applying decline curve analysis, particularly in boundary-dominated flow dry gas wells. First, it has been noted that it is difficult to match a decline exponent, especially at an early stage of well depletion, even with worthy quality data.

### Reserve Estimation Using Decline Curve Analysis for ...

Fetkovich used the curves with values of b between 0 and 1 (hyperbolic and harmonic decline) for matching solution-gas-drive depletion and gas reservoir depletion. Matching and extrapolating these curves is equivalent to using the harmonic and hyperbolic declines with the usual semilog decline curves.

### Gas Reservoir Decline-Curve Analysis Using Type Curves ...

The rate of production decline is depicted by a decline curve. Decline curves generally show the amount of oil or gas produced per unit of time, for many successive periods. Decline curves are generated from Decline Curve Analysis (DCA) software. They utilize past production history of a petroleum reservoir to create a well production profile.

### Oil and Gas Decline Curves

The hyperbolic decline curve has a good fit to production data and in many cases the curve is close to harmonic. It is too early to determine whether the alternative decline curve that is tested, the scaling decline curve, has a better fit in the long term. The report also investigates how the density of the petroleum affects the decline curve.

In *Advanced Production Decline Analysis and Application*, 2015, 12.1.3 Model Diagnoses. The production decline curves have two main functions, including (a) to determine the reservoir permeability parameter by matching the production decline curve with it, which belongs to quantitative analysis, and (b) to diagnose the production performance characteristics, that is, to qualitatively judge the ...

Decline curve analysis. Decline curve analysis relates past performance of gas and oil wells to future performance, but it does not anticipate changes in performance due to operating conditions or changes in reservoir behavior (for more on decline curves, see Reserves estimation.). ### Production histories - AAPG Wiki

Oil depletion is the decline in oil production of a well, oil field, or geographic area. The Hubbert peak theory makes predictions of production rates based on prior discovery rates and anticipated production rates. Hubbert curves predict that the production curves of non-renewing resources approximate a bell curve. Thus, according to this theory, when the peak of production is passed, production rates enter an irreversible decline. The United States Energy Information Administration predicted i
