How to build a web app: A beginner's guide (2020)

Web application development is the process and practice of developing web applications. There is a consensus that the processes involved are extensions of standard software engineering processes. Considering this, along with its unique characteristics, popular frameworks used include the spiral approach and business-oriented approach to application development, among other models that address the requirements for an iterative process. Just as with a traditional desktop application, web applicati

for creating web apps. For more information on ASP.NET, see:

Developing Web Applications with ASP.NET | Microsoft Docs

The web frameworks in the .NET framework are not really recommended for starting the development of new applications. Instead, you should use .NET Core. For existing applications developed using the .NET framework, you can keep maintaining them using the same technology, unless you require features the framework does not support, e.g. you want to run your application on Windows, as well as other operating systems too.

Developing Applications for the Java EE 7 Platform

If you develop web applications, there are a few technologies that you will be using in 2006/7. You will be using either AJAX, JSP/Servlet, Ruby on Rails or Flex/Actionscript. There is no mention of AJAX, which is surprising as it deals with some of the technologies behind it, Flex or Rails and spends about a paragraph on JSP and servlets.
