Disadvantages of Integrated Circuits The major disadvantages of integrated circuits over those made by interconnecting discrete components are as follows : In an IC the various components are part of a small semiconductor chip and the individual component or components cannot be removed or replaced, therefore, if any component in an IC

An electronic component is any basic discrete device or physical entity in an electronic system used to affect electrons or their associated fields. Electronic components are mostly industrial products, available in a singular form and are not to be confused with electrical elements, which are conceptual abstractions representing idealized
