## Medicine

The three cardinal symptoms of TMDs are: facial pain, restricted jaw function and joint noise. Pain Located around the TMJ but may be referred to the head, neck and ear.

## Temporomandibular Joint Dysfunction and Pain Syndromes ...

TMJ disorders — a type of temporomandibular disorder or TMD — can cause pain in your jaw joint and in the muscles that control jaw movement. The exact cause of a person's TMJ disorder is often difficult to determine. Your pain may be due to a combination of factors, such as genetics, arthritis or jaw injury. Some people who have jaw pain also tend to clench or grind their teeth (bruxism), although many people habitually clench or grind their teeth and never develop TMJ disorders.

Many people who experience pain in their face or jaw suspect that they have temporomandibular joint dysfunction, or TMJ. Sometimes, your facial pain may be caused by TMJ, and a visit to your doctor for a referral to a dental specialist would be appropriate. Some people who have facial pain are dealing with a different condition, such as trigeminal neuralgia. This condition may require a referral to a facial pain clinic or a neurologist who treats facial pain.

Temporomandibular joint dysfunction (TMD, TMJD) is an umbrella term covering pain and dysfunction of the muscles of mastication (the muscles that move the jaw) and the temporomandibular joints (the joints which connect the mandible to the skull). The most important feature is pain, followed by restricted mandibular movement, and noises from the temporomandibular joints (TMJ) during jaw movement.
