Field vs Lab experiments. Field experiments are carried out in the real world, away from a laboratory. The advantage of this type of experiment is that it is very practical. Field experiments also allow experiments to take place, with no confounding variables being introduced. Field experiments are often

Primate Research. Field research is typically conducted in 5

distinctive methods.

They are: Direct Observation; In this method, the data is collected via an observational method or subjects in a natural environment. In this method, the behavior or outcome of situation is not interfered in any way by the researcher.

Field Experiments.

Experiments look for the effect that

manipulated variables (independent

variables) have on

measured variables

(dependent variables),

i.e. causal effects. Field

experiments are

conducted in a natural

setting (e.g. at a sports

event or on public

transport), as opposed

to the artificial

environment created in  
laboratory

experiments. Some  
variables cannot be  
controlled due to the  
unpredictability of  
these real-life settings  
(e.g. the public  
interacting with  
participants), but ...
