For convenience, we can assume that the 5 billion people in the world eat an average of 3 meals a day, or 15 billion meals in total. It ...

The socio-cultural context of eating and food choice ...

Few people would argue with this rational assumption. However, despite many studies of food acceptance, very few have shown a strong relationship of acceptance with either food choice or food consumption. This is because food consumption and food selection are extremely complex behaviors; complete models to predict food selection and food consumption might need dozens, hundreds, or even thousands of variables. Food acceptance is only one of these variables, although it is probably one of the ...

The Factors That Influence Our Food Choices: (EUFIC)

1. Introduction. Meat plays an important role in the consumption pattern of most European and North-American consumers (). This can be explained by several factors: (1) meat is perceived as nutritious and healthy (Verbeke et al., 2010), (2) the sensory properties (flavor and texture) of meat are well liked by many consumers (Bredahl et al., 1998, Grunert, 1997, Verbeke et al., 2010), and (3 ...

Factors that guide food choice include taste preference, sensory attributes, cost, availability, convenience, cognitive restraint, and cultural familiarity. In addition, environmental cues and increased portion sizes play a role in the choice and amount of foods consumed.

Food choice - Wikipedia

Bos and colleagues conducted an online survey across three time points to explore acceptance of intervention strategies for low-calorie snack choices that vary in the impact they have on consumers' freedom of choice (providing information, guiding choice through (dis)incentives and restricting choice) in an adult Dutch population.

Food Choice and Nutrition: A Social Psychological Perspective

The sight of a food triggers learned beliefs about its anticipated taste and satiating properties, which influence food selection and intake, and memory for the amount of food consumed helps shape the development of satiety and later food choice. Ambient food odours also have a functional role in energy intake primarily prior to consumption ...

Although food preferences are largely learned, dislike is the main reason parents stop offering or serving their children foods like vegetables. A new study in the Journal of Nutrition Education and Behavior, published by Elsevier, demonstrated that repeatedly offering a variety of vegetables increased acceptance and consumption by children. "In Australia, dietary guidelines for vegetable
