standard g and m codes The most common codes used when programming NC machines tools are G-codes (preparatory functions), and M codes (miscellaneous functions). Other codes such as F, S, D, and T are used for machine functions such as feed, speed, cutter diameter offset, tool number, etc. G-codes are sometimes called cycle codes because they refer to some action occurring on the X, Y, and/or Z-axis of a machine tool.

Standard G Code and M Code | CNC programming basics
G codes: A G code in CNC programming controls the movements of a machine, dictating how and where a machine should move to fabricate a part. M codes: An M code in CNC programming controls miscellaneous machine functions, including starting and stopping specific actions or programs.
