Poaceae or Gramineae is a large and nearly ubiquitous family of monocotyledonous flowering plants known as grasses. It includes the cereal grasses, bamboos and the grasses of natural grassland and species cultivated in lawns and pasture. The latter are commonly referred to collectively as grass. With around 780 genera and around 12,000 species, the Poaceae is the fifth-largest plant family, following the Asteraceae, Orchidaceae, Fabaceae and Rubiaceae. The Poaceae are the most economically impor

The most famous modern grass taxonomist at Kew is Derek Clayton. He assembled data on all grasses of the world and published the reference book *Genera Graminum* in 1986. This compendium of information allowed the study of grass diversity to take a leap forwards, and paved the way for later computerised systems.

All true grasses belong to a single family of flowering plants, Gramineae or Poaceae. I use the phrase "true grasses" because there are many plants that have "grass" as part of their common name that are not, in fact, grasses. Many, but not all, have grass-like leaves that fool the uninitiated. "GRASSES" THAT ARE NOT GRASSES
