Many of the features have been introduced at specific requests from some of you. Others are still at preparatory stage and will be implemented soon.

### General Principles Of Good Sampling

General Principles of Good Sampling Practice is based on an intensive literature survey covering a wide range of materials, offers guidance on particle size reduction of solids, and looks at requirements for suitable containers and storage prior to analysis. The book gives particular emphasis to the preparation of sampling plans.

Principles of Sampling. There are two important principles of sampling on which the sampling theory depends on: Principle of 'Statistical Regularity': The principle of statistical regularity is derived from the theory of probability in mathematics. According to this principle, when a large number of items is selected at random from the universe, then it is likely to possess the same ...

3) Principle of validity: - if valid tests are derived only then sampling design is termed as valid. 4) Principle of optimization: - this principle states that with the help of sample one must be able to get optimum results with maximum efficiency and minimum cost. These are the principles of sampling in statistics.

(3) Selects the sample, [Salant, p58] and decide on a sampling technique, and; (4) Makes an inference about the population. [Raj, p4] All these four steps are interwoven and cannot be considered isolated from one another. Simple random sampling, systematic sampling, stratified sampling fall into the category of simple sampling techniques.

### **SAMPLING TECHNIQUES INTRODUCTION**

The process of sampling in research is governed by three principles. It should be kept in mind that sampling can only provide an estimate of the population mean and population parameters and in majority of cases there will be some difference between population and sample characteristics. Population is an entity and sample is its part so their ...
