Health impact assessment is defined as "a combination of procedures, methods, and tools by which a policy, program, or project may be judged as to its potential effects on the health of a population, and the distribution of those effects within the population."

Health impact assessment - Wikipedia

Health effects are often overlooked in the planning of policies, programmes or projects, which has led to international and national pressure for evaluation of potential influence. For this reason, Health Impact Assessment (HIA) has been emphasized by many national governments and international organizations such as the European Union and WHO.

Key concepts and principles of assessment

Theory-based approaches have been discussed in evaluation literature for many years (Weiss, 1997; Rogers, 2007; Funnell & Rogers, 2011). While there is little agreement either on the terminology or the concepts, there is consistency in the main messages and agreement on the value of theory-based approaches.
