Terminology Standards | HIMSS

Clinical Terminology: HL7. Health Level 7 (HL7) is a healthcare standards organization that produces a variety of healthcare interoperability standards. They are quite well known for their messaging standards but also produce and maintain terminology standards. Their terminology contains a mix of code sets that aren't found in other standard terminologies and are needed for their messaging and V3 data model standards. For example, they have code sets for admission type and administrative ...

Know Which Healthcare Terminology Standard to Use

Clinical Terminologies and Use of Standards In 2003, the National Committee on Vital and Health Statistics (NCVHS) recommended the first set of clinical terminologies as national standards: Snomed CT, RxNorm, and LOINC. At that time the use of these reference terminology standards was voluntary, as it officially still is.

Clinical Terminologies and Use of Standards | Medicomp Systems

The terminology instead is implemented in software applications where healthcare providers record clinical information using identifiers that refer to concepts that formally defined party of terminology during process of care and allows for the collection of clinical data at a granular level.
