Heart Sounds and Murmurs Across the Lifespan (with CD ...

Heart murmurs are sounds during your heartbeat cycle — such as whooshing or swishing — made by turbulent blood in or near your heart. These sounds can be heard with a stethoscope. A normal heartbeat makes two sounds like “lubb-dupp” (sometimes described as “lub-DUP”), which are the sounds of your heart valves closing.

Heart murmurs - Symptoms and causes - Mayo Clinic

Heart murmurs in some people, heart murmurs are just the sound of blood flow characteristic to that person. Doctors call this an “innocent heart murmur.” Heart murmur may also be caused by turbulent flow of blood across the heart valves, however, which may indicate heart disease.

What Are the Four Heart Sounds? - MedicineNet

A murmur is the sound produced due to turbulent flow within the heart and great vessels. If within the heart, it may be due to degenerative valves or developmental defects. Murmur can be classified into Systolic Murmurs, Diastolic Murmurs and Continuous Murmurs.

Heart murmurs may be classified as physiological or innocent murmurs and pathologic murmurs. A physiological murmur is heard when there is increased turbulence of blood flow across a normal valve, as can happen in the conditions thyrotoxicosis and anemia, as well as during fever and exercise.

Heart Sounds - Origin, Timing and Murmurs | Medical Library

Heart murmursare the other heart sounds you will hear if you listen to enough hearts. They will often sound like the words “rush” or “hush” and can last throughout the heartbeat.

Heart Murmur? Listening For Heart Sounds (With Audio)

Heart murmur is the medical term for audible blood flow through the heart. There are two main types of heart murmurs: physiologic and pathophysiologic.

What to know about flow murmurs

Heart murmurs are heart sounds produced when blood is pumped across a heart valve and creates a sound loud enough to be heard with a stethoscope.. There are two types of murmurs. A functional murmur or “physiologic murmur” is a heart murmur that is primarily due to physiologic conditions outside the heart. Other types of murmurs are due to structural defects in the heart itself.

Heart murmur - Wikipedia
