Strongylocentrotus droebachiensis is commonly known as the green sea urchin because of its characteristic green color. It is commonly found in northern waters all around the world including both the Pacific and Atlantic Oceans to a northerly latitude of 81 degrees and as far south as Puget Sound (in Washington, U.S.) and England. The average adult size is around 50 mm (2 in), but it has been ...

Strongylocentrotus droebachiensis - Wikipedia

Echinoderms (Phylum Echinodermata) Figure 19.1.10.11 Starfish. Characteristics: radial symmetry. HOWEVER, their larvae have bilateral symmetry so the echinoderms probably evolved from bilaterally symmetrical ancestors and properly belong in the Bilateria. water vascular system.
