nice thing about IPv6 is that subnetting is a lot easier. There are no subnet masks! It's all in the address. We will all have to learn how to network with IPv6 sooner than later. These questions should help familiarize you with the IPv6 world and networking with IPv6. read more at our basic IPv6 subnetting information.

IPv6 Subnetting

Practice Questions
All, I'm having a difficult time trying to find any information on subnetting a v6 address into smaller subnets. A coworker is studying for an MS exam and they had a question on there that frankly makes no sense. The subnet calculators that I'm using doesn't give the same answer either. I'm going t...

Solved: IPv6 Subnetting questions - Cisco Community

Quick Answer: 175. Detailed Answer: 177. You are designing an IP address scheme for your new remote office. The vice president of IT calls to tell you that you will be in charge of the 192.168.1.64/26 subnetwork. This supplies you with a single subnetwork with

62 hosts. You need to have at least four subnets with 14 hosts in each subnet.

scheme with IPv6, ACLs could be simplified within the organization and therefore have the potential to become more secure. The main issue with dual stack means that you have double the ...

IPv6 Questions and Answers | Infoblox

IPv6 addresses use 128 bits to represent an address which includes bits to be used for subnetting. The second

half of the address (least significant 64 bits) is always used for hosts only. Therefore, there is no compromise if we subnet the network. [Image: IPv6 Subnetting] 16 bits of subnet is equivalent to IPv4's Class B Network.

IPv6 - Subnetting - Tutorialspoint

There are several ways to assign IPv6 to a device: + Static IPv6: The IPv6 address,

subnet prefix length and default gateway are configured manually in the system configuration file. + Dynamic Host Configuration Protocol for IPv6 (DHCPv6): this mode requires a DHCPv6 server in your LAN.This is the most used mode for IPv6 assignment. There are two methods of DHCPv6:
