The Rain Forest - A rain forest is a thick jungle which gets an unusually large amount of rain. Rain forests cover about 6% of the earth's surface. They hold about one-half of the world's plant and animal types. The four layers of a rain forest are the emergent layer, canopy layer, understory layer and forest floor. The emergent layer is made up of very tall

Rainforests | Classroom Secrets

Rainforests are different from other forests in the world because they get a lot of rain every year – this makes them damp and humid. There are five main spots where rainforest habitats are located – Africa, Asia, Australia, Central America and South America. The largest
