A lens is a tool used to bring light to a fixed focal point. In a film camera, the lens sends the light to the film strip, while in a digital camera (like DSLRs or mirrorless cameras), the lens directs light to a digital sensor. Camera lenses are made up of a series of glass plates that are convex (curved outward) or concave (curved inward).

Lightpainting is a form of long exposure photography, and there aren't a lot of people who do it. We set up a camera on a tripod and then I wave a bunch of lights around. I know it sounds CRAZY. And it is, with the results we get. So when we get together for a session your photos are going to be one-of-a-kind.

### **Light & Lense**

The wider a lens's aperture, the more light the lens lets in. So lenses with wide maximum apertures (in the f/1.2-f/1.8 range) can capture lots of light. Whereas lenses with smaller maximum apertures (in the f/2.8-f/4 range) are a bit more limited. Can you see the aperture blades of this lens?

### **The Best Portrait Photography Lenses (9 Great Picks!)**

This 50 mm lens is a good choice for subject photography too as its f/1.8 aperture helps you take photographs even in poor lighting. Sometimes even a lightbox doesn't provide enough light for bright images, whereas f/1.8 aperture focuses on some elements keeping unnecessary ones

blurred.

Photography, and in particular the photography of people gives my artistic thoughts and visions an outlet which lets others see the world the same way I do, for that second in time. Photography shines a light into the soul and captures the true spirit, I will never cease to be amazed by and drawn to this most powerful medium.
