the Mokele-mbembe, an alleged living dinosaur in the Likouala swamp region of the Republic of Congo. Accompanied by University of Arizona ecologist Richard Greenwell and Congolese biologist Marcellin Agnagna, Mackal undertook two expeditions, the first in 1980 and the second in 1981, to find and photograph the creature.

In Congo River Basin mythology, Mokele-mbembe (Lingala: mókéle <sup>mbé</sup>mbé, "rainbow") is a water-dwelling entity, sometimes described as a living creature, sometimes as a spirit.. During the early 20th century, descriptions of the entity increasingly reflected public fascination with dinosaurs, including aspects of particular dinosaur species now known among scientists to be incorrect ...

## **Mokele-mbembe - Wikipedia**

Cryptozoologists, who have never met a supposedly extinct dinosaur that they didn't like, have naturally identified Mokele-mbembe as a living sauropod (the family of huge, four-legged dinosaurs characterized by Brachiosaurus and Diplodocus) the last straggling descendants of which went extinct 65 million years ago.

In Search of Mokele-Mbembe is a 1987 cryptozoological book by Roy P. Mackal, focusing on his research on and searches for living dinosaurs in the Congo, including the mokele-mbembe and the emela-ntouka. Although the mokele-mbembe was first reported in the 1910's, A Living Dinosaur first brought it to popular attention.

## **A Living Dinosaur? | Cryptids and Myths Wiki | Fandom**

If Mokele-Mbembe is a living dinosaur, then it makes the claim of total dinosaur extinction unfounded. The Congolese people are very familiar with the aquatic dinosaur living in the Likoula swamp region. They call this Apatosaurus-like creature "Mokele-Mbembe" which means: "one who stops the flow of rivers".

The Cryptid Zoo: Mokele-Mbembe African folklore from the Congo describes an animal that seems exactly like a small sauropod dinosaur. This creature lives in the most remote swamps. It is about the same size as an elephant and it is a herbivore, but it will jealously defend its territory against hippos and humans.

## **(the Mokele-Mbembe, Part 1 ...**

Such is the story of Mokele-mbembe, a creature that some scientists believe could be a surviving sauropod dinosaur. The one area today that would favor living dinosaurs is the vast and unexplored swamps of equatorial Africa. Many of the early accounts of the flora and fauna of West and Central Africa came from missionaries and explorers.
