With night photography, you will need to experiment with long exposure times. Play with your DSLR camera's manual settings in order to get the right shot. Start with your aperture open as wide as possible. Try your f-stop around *f*/5.6 or even as low as *f*/2.8. Set your shutter speed to 10 seconds. Yes, your shutter will be open for 10 full seconds, at least (exposure time varies).

Complete Guide to Mastering Night Photography - 2020 ...

Soft/diffused light is the most flattering for portrait photography, but just because hard/direct light creates dramatic shadows, it doesn't mean you cannot use it to create stunning photos. For instance, look at this portrait by Elias Williams where he sets off the harsh light of the sun by using side lighting.
