

Math 114 Final Exam Solutions

Thank you for downloading **math 114 final exam solutions**. As you may know, people have search numerous times for their chosen readings like this math 114 final exam solutions, but end up in harmful downloads.

Rather than enjoying a good book with a cup of tea in the afternoon, instead they cope with some harmful virus inside their laptop.

math 114 final exam solutions is available in our digital library an online access to it is set as public so you can get it instantly.

Our books collection hosts in multiple locations, allowing you to get the most less latency time to download any of our books like this one.

Merely said, the math 114 final exam solutions is universally compatible with any devices to read

4eBooks has a huge collection of computer programming ebooks. Each downloadable ebook has a short review with a description. You can find over thousand of free ebooks in every computer programming field like .Net, Actionscript, Ajax, Apache and etc.

MATH 114 Final Exam - Solutions 1. Is the function $f(x) = x^2$ from \mathbb{N} to \mathbb{N} (a) one-to-one? Yes. Suppose $f(x_1) = f(x_2)$. For real numbers we have $x^2 = x_2^2 \implies x_1 = x_2$. Since x_1 and x_2 are natural numbers, $x_1 = x_2$. (b) onto? No. For example, 2 is not in the image because there is no $x \in \mathbb{N}$ such that $x^2 = 2$.

Final Exam Solutions - cs2102: Discrete Math

Math 113 Final Exam Solutions 1. a) (5 points) A ring R is called Boolean if $a^2 = a$ for all $a \in R$. Show that $xy = yx$ for all $x, y \in R$ in a Boolean ring R . (Hint: consider $(x+y)^2$) $(x+y)^2 = x^2 + xy + yx + y^2$. Since R is Boolean, we also have $(x+y)^2 = x+y$ as well as $x^2 = x, y^2 = y$. So we have $x+y = x^2 + xy + yx + y^2 = x + xy + yx + y$. Adding $x - y$ to each side, we get

Math 113 Final Exam Solutions

Math 113 Final Exam Practice Problem Solutions 1. What are the domain and range of the function $f(x) = \ln x^p - x^p$? Answer: $p > 0$ is only defined for $x > 0$, and $\ln x^p$ is only defined for $x > 0$. Hence, the domain of the function is $x > 0$. Notice that $\lim_{x \rightarrow 0^+} \ln x^p - x^p = -\infty$; since $x^p \rightarrow 0^+$ as $x \rightarrow 0^+$. Now, we can evaluate $\lim_{x \rightarrow \infty} \ln x^p - x^p$ using L'Hopital's Rule; it ...
