This section explains how to set up a RabbitMQ cluster with Prometheus and Grafana dashboards, as well as... RabbitMQ Overview ...

### Monitoring with Prometheus & Grafana — RabbitMQ

Configuring Prometheus to monitor itself. Prometheus collects metrics from targets by scraping metrics HTTP endpoints. Since Prometheus exposes data in the same manner about itself, it can also scrape and monitor its own health. While a Prometheus server that collects only data about itself is not very useful, it is a good starting example.

### Getting started | Prometheus

To install Prometheus and Grafana, activate the integrated Cluster Monitoring support in Rancher. From the Global view, navigate to the cluster that you want to configure and select Tools -> Monitoring to enable it. In order to allow changes to Grafana to persist, make sure to enable persistent storage for Grafana and Prometheus.

### Monitor Etcd with Prometheus and Grafana using Rancher

Prometheus is an open-source systems monitoring and alerting toolkit originally built at SoundCloud. It records real-time metrics in a time series database built using a HTTP pull model, with flexible queries and real-time alerting. It can absorb huge amount of data every second. What is Alert Manager ?

### Kubernetes cluster Monitoring with Prometheus and Grafana

Operating on K8s, you may already be using Prometheus, the de facto Kubernetes monitoring solution since emerging from the Cloud Native Computing Foundation (CNCF) in 2018. Used with visualization tool Grafana,they can provide a central dashboard for performance analytics on applications and the K8s cluster itself.
