Nuclear medicine equipment uses advanced nuclear technology for diagnostic medical imaging and disease treatment. Different types of nuclear medicine equipment are designed for use in conjunction with specific radioisotopes for a variety of imaging purposes. Specialized sensors act as cameras to detect and track radiation

Nuclear medicine is a medical specialty involving the application of radioactive substances in the diagnosis and treatment of disease. Nuclear medicine imaging, in a sense, is "radiology done inside out" or "endoradiology" because it records radiation emitting from within the body rather than radiation that is generated by external sources like X-
