"Nutritional assessment can be defined as the interpretation from dietary, laboratory, anthropometric, and clinical studies. It is used to determine the nutritional status of individual or population groups as influenced by the intake and utilization of nutrients" (Gibson, 2005). Nutritional status represents meeting of human body needs for nutritive and protective substances and the reflection of these in physical, physiological, and biochemical characteristics, functional capability. ...

Nutrition-your-life-science-homework-assessment-answers

A nutrition assessment is a type of assessment that focuses on the nutritional health and/or development of an individual. It is a means of ensuring that the person taking the assessment has met at the very least the minimum level of nutrition or nutrient intake. In most cases, these kinds of assessments are used to determine a child's state, whether they are malnourished, average or obese.

Ongoing studies are investigating whether the consumption of 30 percent fewer calories (undernutrition, not malnutrition) slows aging and age-related disease and extends life spans in nonhuman primates. There is no evidence that severe energy restriction would extend the human life span beyond its current maximum of 115 to 120 years. Jean Weinger
