horizontal scaling and flexible data model means they can address large volumes of rapidly changing data, making them great for agile development, quick iterations, and frequent code pushes. In a nutshell, the difference between relational databases and NoSQL databases are performance, availability, and scalability.

NoSQL Databases Explained | IBM

Time to Live (TTL) is a mechanism that allows you to automatically expire table rows. TTL is expressed as the amount of time data is allowed to live in the store. Data which has reached its expiration timeout value can no longer be retrieved, and will not appear in any store statistics. . . . Whether the data is
