[PDF] Oral Anatomy Embryology And Histology Download Full ...

Oral embryology Development of the face 4 weeks of intrauterine life. The primitive oral cavity, which is known as the stomodeum, develops five facial swellings : one frontonasal process, two maxillary processes and two mandibular processes. The frontonasal process eventually develops to form the forehead, nose and philtrum; the two maxillary processes form the middle face and upper lip; and the two mandibular processes form the mandible and lower lip.
