Physics Solution: (a) The
establishes that the ionization energy of He is much larger than that of H. The main reason is that the nuclear charge of He is twice that of H while all the electrons are in the first shell, which means that the potential energy of the electrons are much lower in the case of He. They

Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (v_f), and initial velocity (v_i). If values of three variables are known,

Force is an influence on an object that causes it to accelerate. Its units are given in $\text{kg}\cdot\text{m}/\text{s}^2$, or Newtons (N). Force is given by the formula \$

$$\vec{F} = m \vec{a}$$

\$

Average force is equal to a change in linear momentum over time for a given interval, and instantaneous force is equal to the derivative of linear momentum with respect to time.
$$F_{\text{avg}} = \frac{\Delta p}{\Delta t}$$
