Sail trim is all balancing act. As soon as the sail plan changes, so does the handling. Balancing the sail set correctly will allow the yacht to sail with little requirement of the rudder. In an ideal world when the wind is hitting each sail with the same force, the sails should steer the boat and the rudder merely guide it along its path.

Wind speed increases and frees a little with height. Therefore the top of the sail is trimmed freer than the base of the sail. The amount of twist is judged by looking up the leech to see if the top of the sail falls to leeward more than the central sections. A more precise method is watching the telltales streaming from the leech.
