INTRODUCTION to TAXONOMY OF ANGIOSPERMS Taxonomy is concerned with the laws governing the classification of plants. The term taxonomy includes two Greek words taxis - arrangement and nomos - laws. Plant taxonomy is other name for systematic botany.

Taxonomy of Angiosperms TYPES OF CLASSIFICATION

Angiosperm, any of about 300,000 species of flowering plants, the largest and most diverse group within the kingdom Plantae. Angiosperms represent approximately 80 percent of all the known green plants now living. The angiosperms are vascular seed plants in which the ovule (egg) is fertilized and develops into a seed in an enclosed hollow ovary. The ovary itself is usually enclosed in a flower, that part of the angiospermous plant that contains the male or female reproductive organs or both.

Download Introduction To Taxonomy Of Angiosperms by B K ...

The basal angiosperms are a broad group of the most primitive flowering plants. They do not belong to either the monocots or eudicots but were for a long time lumped together with the eudicots into a well-known

group called the dicots. The basal angiosperms are mostly woody plants that produce seeds and flowers.

Basal Angiosperms | Basic Biology

Angiosperms are heterosporous, i.e., produce two kinds of spores, microspore (pollen grains) and megaspores. A single functional megaspore is permanently retained within the nucellus. The pollen grains transfer from the anther to stigma and reproduction takes place by pollination.

Angiosperms - Characteristics Of Angiosperms

Their ways of classification are rooted in their practical considerations. The history of classification starts from the time of the earliest Indian Philosophers like Charak, Sushruta, early Greek philosophers like Aristotle, Plato, Pliny and others also tried to classify ...
