Amazon.com: shrimp hatchery

A site was found in South Dade County that had an existing building and access to freshwater at a depth of 20 feet and brackish water at 85 feet. The hatchery phase of prawn farming requires higher salinities than the growout phase, which can be done in freshwater. At this new site, Mulvihill produced 50 postlarvae per liter.

PaulMulvihill, The First Prawn Farmer in the USA

Tiger prawn breeding and post-larvae production. Prawn larvae are produced in hatcheries, which use wild-caught spawners or broodstock collected mainly from the coastal waters between Cooktown and Innisfail. The majority of these spawners are gonadally mature and when they are transferred to the hatchery they either spawn spontaneously or are induced through the use of eyestalk ablation.

Tiger prawn breeding and post-larvae production | Business ...

A shrimp hatchery is one of the locations where shrimp are kept during their lifecycle development on the way to becoming fully-formed shrimp for commercial sale. Shrimp hatcheries can be found in any region where the shrimp industry is active, and some regions have numerous hatcheries supplying large farming operations.
