development are two major aspects of children not readily apparent in adults. The topic of human growth and development is extensive with many detailed dedicated reference works (e.g. 2,3). There are several reviews that detail formulation options and their suitability for children across a range of ages 4-8.

Developing a robust tablet formulation that can be scaled into product manufacturing without any issues can be a difficult challenge. Formulators and research professionals alike are tasked with the development process and must have an understanding of the science involved with powder compaction.
