Integrated technology functions for counting and measuring tasks, regulation and motion control make the SIMATIC S7-1200 a versatile system that is perfectly suited for numerous automation tasks. Thanks to the integrated PID controllers, you can precisely and efficiently adjust physical variables (such as room temperature) to a specific target value.

For S7-1200, the motion control version is V6.0 for TIA V15... Using the analog output with motion control directly, there is no hijacking of this port... In OB "MC-PostServo" you could manipulate the data area of the output value, as it is written to a DB or directly to analog out. And I think it is working as well in S7-1200.

This course about servo motor systems. We will control panasonic servo motor systems with puls and dir signals. We must use the transistor output PLC. Because of this we will use S7 1212 dc/dc/dc. S7 1200 plc can control 4 servo motors with pulse-dir signals. Pulse signal determines the motor speed and position. 100,000 pulses per second sent at ...
