Download Free Square Root Geometric Model 7th Grade

We've shown a geometric model to verify each of these squares. The square root of a number n is a number that, when multiplied by itself, equals n . Here are the square roots of the perfect squares above. This model shows the number 169 as a square. From the model, what is the square root of 169? We can count the number of units

Chapter 111. Subchapter C

In mathematics, a square root of a number x is a number y such that $y^2 = x$; in other words, a number y whose square (the result of multiplying the number by itself, or $y \cdot y$) is x . For example, 4 and -4 are square roots of 16 because $4^2 = (-4)^2 = 16$. Every nonnegative real number x has a unique
