Analysis I - Third Edition | Terence Tao | Springer

Let $f(x, y)$ be the function $f(x, y) := \frac{x^2 + y^2}{x^2 + y^2 + 1}$. A common manoeuvre in analysis is to interchange two partial derivatives, thus one expects $\frac{\partial}{\partial x} \frac{\partial f}{\partial y} = \frac{\partial}{\partial y} \frac{\partial f}{\partial x}$. But from the quotient rule we have $\frac{\partial}{\partial y} \frac{\partial f}{\partial x}(x, y) = \frac{2xy^4 - 3xy^2}{(x^2 + y^2 + 1)^2}$ and in particular $\frac{\partial}{\partial y} \frac{\partial f}{\partial x}(x, 0) = 0$.

Tao has taken a very literal approach to teaching by first principles. It is typical for Analysis books to begin by constructing the Reals. Not for Tao though, he takes a unique approach. He starts at nothing.
