It's called wobbly cat syndrome for a reason. You'll notice symptoms in a cerebellar hypoplasia cat as soon as he or she can stand and walk, around 4-6 weeks of age. As mentioned earlier, the severity of the condition has a wide range. Symptoms typically include: Head bobbing, head tremors; Jerky or uncoordinated walking

Caring For a Cerebellar Hypoplasia Cat: 10 Tips - Litter-Robot

Syndrome, in the training sessions of Operation Kronos, would pit retired Supers against a prototype version of the robot, collecting data on the fight as it progressed. If that version was defeated, he would use the collected battle data to develop a new, improved model to use against the Super that had defeated the previous unit, thereby ...
